

## **Dear Neuroscience Make Modelshop demo risk assessment**

The modelmaking portion of the DN event is low risk. Whilst we intend to bring along certain small hand tools which are potentially dangerous (sharp edges etc), they will not be handled by the public. Our demonstration/discussion will consist of showing a selection of tools alongside an architectural model and explaining their use in the context of the build process and how this relates the the neuroscience theme of sense of personal and wider space.

We may have some plastic model sample components that can be passed around and examined by the attendees but they are lightweight, and safe for handling.

For the workshop portion of the event we intend to have a table where the public can approach more closely, ask questions and interact with more samples. Again attendees will not be handling any potentially dangerous tools.
